git-scm.com

The screenshot shows the official website for Git (git-scm.com). The header features the word "git" in large letters with a small icon above it, followed by the tagline "the fast version control system". Below the header is a navigation bar with links for Home, About Git, Documentation, Download, Tools & Hosting, and Wiki. A cartoon character of a brown bear holding a branch is visible on the right side of the header.

Git is...

Git is an **open source, distributed version control system** designed to handle everything from small to very large projects with speed and efficiency.

Every Git clone is a full-fledged repository with complete history and full revision tracking capabilities, not dependent on network access or a central server.

Branching and merging are fast and easy to do.

Git is used for version control of files, much like tools such as [Mercurial](#), [Bazaar](#), [Subversion](#), [CVS](#), [Perforce](#), and [Visual SourceSafe](#).

The screenshot shows the official website for Git. At the top, there's a green banner with the word "git" in large letters and "the fast version control system" in smaller text. Below the banner is a navigation bar with links for Home, About Git, Documentation (which is circled in black), Download, Tools & Hosting, and Wiki. The main content area has three sections: "Git is..." (describing Git as an open source, distributed version control system), "Projects using Git" (listing Git, Linux Kernel, and Perl), and "Download Git" (informing users that the latest stable release is v1.6.1.1). A cartoon character of a yellow blob with a pipe is visible on the right side of the banner.
